

VIRPURE

Biocide Fungicide, Virucide

Control of water quality is the key factor for successful aquatic animals like fish, prawn and shrimp. An open water system with sufficient good water quality may ensure successful aquaculture. Under lower water quality conditions there are chances for occurrence of mortalities by diseases due to viral, bacterial, protozoal, fungal pathogens. High populations of aquatic animals can be kept healthy under successful by maintaining proper sanitisation. The increased demand in water quality and quantity in aquaculture has resulted in a growing interest in using water sanitisers and disinfectants.

Virpure is a multipurpose sanitizer and disinfectant. Virpure sanitizes the pond water and controls tail rots and gill infections. It effectively controls micro-bio loads like virus bacteria, fungus and protozoan organisms in the ponds. Virpure is environmentally friendly and it is easy to use. It effects the growth of the animal and productivity.

Key Benefits

- Effectively works against Viral, Bacterial and Fungal contaminants in water.
- Improves the health and yield of the culture and relieves the species from suffocation which will help it grow better and faster.
- It controls tail rot, Black gill and Red disease in shrimps.
- Clears pond pollution and make the pond fresh.
- Reduces stress on Aquatic animals and Improves immunity.

COMPOSITION

- Formaldehyde
- Glutaraldehyde
- Elemental copper
- CH₃COOH
- TBTO

Dosage Schedule

- 500 ml —1 Ltr. Per Acre. Or as directed by the aqua consultant.
