

# AMMOBIND

Natural Ammonia and Toxic gas Binder Containing Yucca schidigera

The growth and performance of shrimp, prawn and fish in culture systems are purely depended by environmental conditions. The most important element which has to be monitored in aquaculture ponds are ammonia level, dissolved oxygen and plankton balance to obtain optimum yield. Actually ammonia is heavier than oxygen, logically in case any imbalances in Ammonia decreases dissolved oxygen when it is accumulated in pond bottoms. Contamination of D.O affects the growth of the animal leading to lower productivity. Therefore it causes mortality which leads to collapse the yielding of the culture.

**Ammobind** is a high quality Yucca schidigera liquid extract formulation for improvement of production performance of aquaculture species. Ammobind is a Yucca plant extract, which has a good bonding capacity, and hence helps in reduction of toxic gases present in pond water. Yucca is considered as Safe product.

## Key Benefits

- Improves the health and yield of the culture and relieves the species from suffocation which will help it grow better and faster.
- Binds toxic gases like ammonia, H<sub>2</sub>S and SO<sub>2</sub> of the pond bottom and clears the toxic gases in the water.
- Cleans black and blue gill problems that occur for want of D.O., particularly in high density culture.
- Ensures that the D.O. which is available to the culture species is free from all toxic gases.
- Reduces stress on Aquatic animals and improves immunity.

## COMPOSITION

Pure concentrated extract of Yucca schidigera and beneficial bacteria of Nitrosomonas and Nitrobactersps. Having bio-degradant action.

## Dosage Schedule

200-500 gms / Per Acre / 1mtr. Water depth.

Repeat the dose once in 3-4 weeks for better maintenance aquaculture pond.

## VEDAAS BIOSCIENCES

Category-1, Plot No. 20/B, Block-31,  
Autonagar, Rangareddy Dist., Hyderabad
